

PhotoGraV

PhotoGraV efficiently processes scanned photographs so that they can be engraved on a variety of common materials with confidence that the engraved photographs will be of superb quality.

Traditionally, the engraving of photographs has been difficult and has been a hit or miss endeavor resulting in many discarded products. The process has been so difficult and time consuming, in fact, that many engraving shops simply do not offer engraved photographs as one of their products.

Now you can engrave photographs with ease!

Only **\$349**
per Seat!

PhotoGraV includes powerful tools that have been found effective in processing photos for laser engraving:

- **Automated** application of these tools to the subject photo;
- **Simulation** of the engraving process for common materials so the "engraved product" can be inspected before it is actually engraved;
- **Interactive** process with adjustable enhancements and real-time visual feedback;
- **Reports** and color proofs for approval and reference;
- **User defined** parameter sets can be saved for further customization;
- **Calibrated** to most laser engraving equipment and common materials;
- **Color Clipart** from CorelDraw can be easily engraved by processing with *PhotoGraV*.

MEGA COLLECTION

5000+ images now combined and organized in a 8.5" x 11" 276 page catalog, spiral bound with durable laminated covers

Vector Art is a unique and profitable resource for computerized signmaking

Unlike other "clipart" bundles, Vector Art is created by some of the best sign and vehicle graphic artists in the world. This original artwork is scanned, vectorized and painstakingly "cleaned up" by our editors and then expertly formatted for trouble free import to sign and graphics programs.

Classroom Pricing
