## All-in-one 3D Printing Adhesives

*Sure adhesion with "magical release"!*

### Magigoo Original

### Magigoo Professional Series

**Magigoo® Original** is designed as an easy to use 3D printing adhesive addressing "the first layer non-stick problem", the most common problem found in FDM 3D printing technology. This standard adhesive works for most commonly printed filaments e.g. PLA, ABS, PETG, TPU.

Magigoo is different than other products as its has **non-hazardous** mix of chemicals allowing for safe use and unrestricted shipping. It has a unique easy release mechanism that sticks while the build plate is hot and releases once cooled down. It provides further convenience as it is **easily cleaned with just water**.

#### How to use:

**Magigoo® Professional Series** is ideal for engineering materials from Dow, DuPont, DSM, Owens Corning, BASF, Fillamentum, Clariant, Polymaker, Formfutura, Lehigh and others that need to apply additional layer of adhesion for improved and reliable 3D printing. Easy release of polypropylene, polycarbonate, nylons and more commonly used filaments PLA, ABS, PETG.

- MAGIGOO PRO HT for High Temperature Filaments
- MAGIGOO PRO FLEX for Flexible Filaments
- MAGIGOO PRO PA for Nylon Filaments
- MAGIGOO PRO PC for Polycarbonate Filaments
- MAGIGOO PRO PP for Polypropylene Filaments
- MAGIGOO PRO PPGF for Glass Fiber Polypropylene

#### The Magigoo PRO Kit

A convenient kit includes the most widely used Professional Adhesives:

- x1 : 50ml Magigoo® ABS Pen Bottle
- x1 : 50ml Magigoo® PP Pen Bottle
- x1 : 50ml Magigoo® PC Pen Bottle
- x1 : 50ml Magigoo® PA Pen Bottle
- x1 : Magigoo® Cleaning Cloth
- Folded Instructions Leaflets

Works on: Glass

Used for: PLA, ABS, HIPS, PETG, TPU, PP, PC, Nylon filaments

Not only does it have an incredible "easy release mechanism", it's also non-toxic and odorless!
