PrintLab is an online platform of 3D printing courses, projects and design challenges.
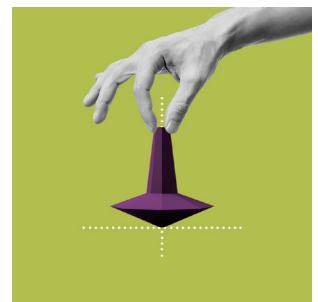

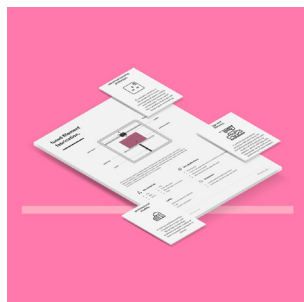

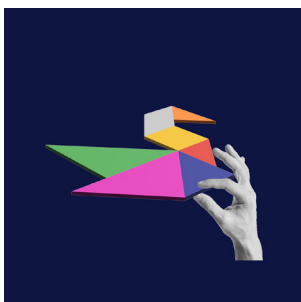

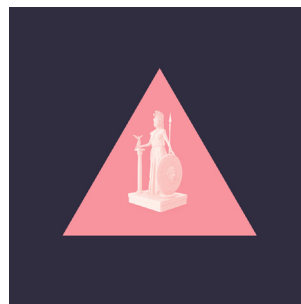

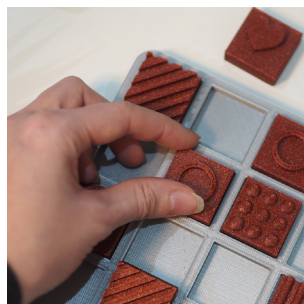

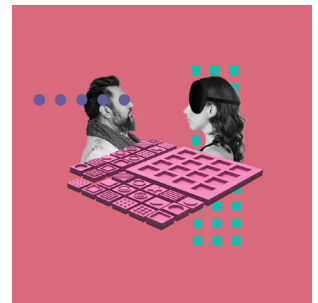

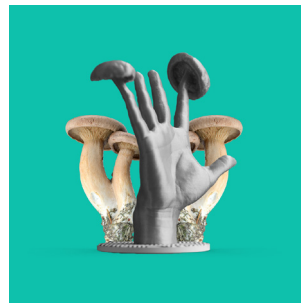

Begin by selecting mini courses to build foundational knowledge and technical skills.

Then move on to participate in projects, where you'll go through the full creative process.

Courses and projects will prepare you for open-ended design challenges.

Do you have 3D printing equipment at your makerspace and want to maximise the potential and usage of this amazing technology? Our learning platform can assist you in both training your staff and teaching your members how to design and make unique products for your local community!
